

## Overview:

Contact Management System repository! This project is a simple and efficient way to manage your contacts using a console-based application written in Java. Whether you're an individual looking to keep your contacts organized or a developer seeking a straightforward project for learning, this Contact Management System is a great choice.

## Features:

- **Add Contacts:** Easily add new contacts with their name, phone number, and email.
- **View Contacts:** Review your contacts in a clean and organized format.
- **Data Persistence:** Contacts are stored persistently in a file, ensuring your data is retained between sessions.
- **User-Friendly Interface:** The console-based interface is intuitive and user-friendly.
